

# Star tent

STELLAR

The star tent is the perfect eye-catcher you can use for any kind of event. Thanks to its striking height and elegant appearance, it catches the eye from miles away. Under the exclusive star tent, you will experience the perfect combination of style, comfort and sophistication, giving any event the allure it deserves.

## FABRIC

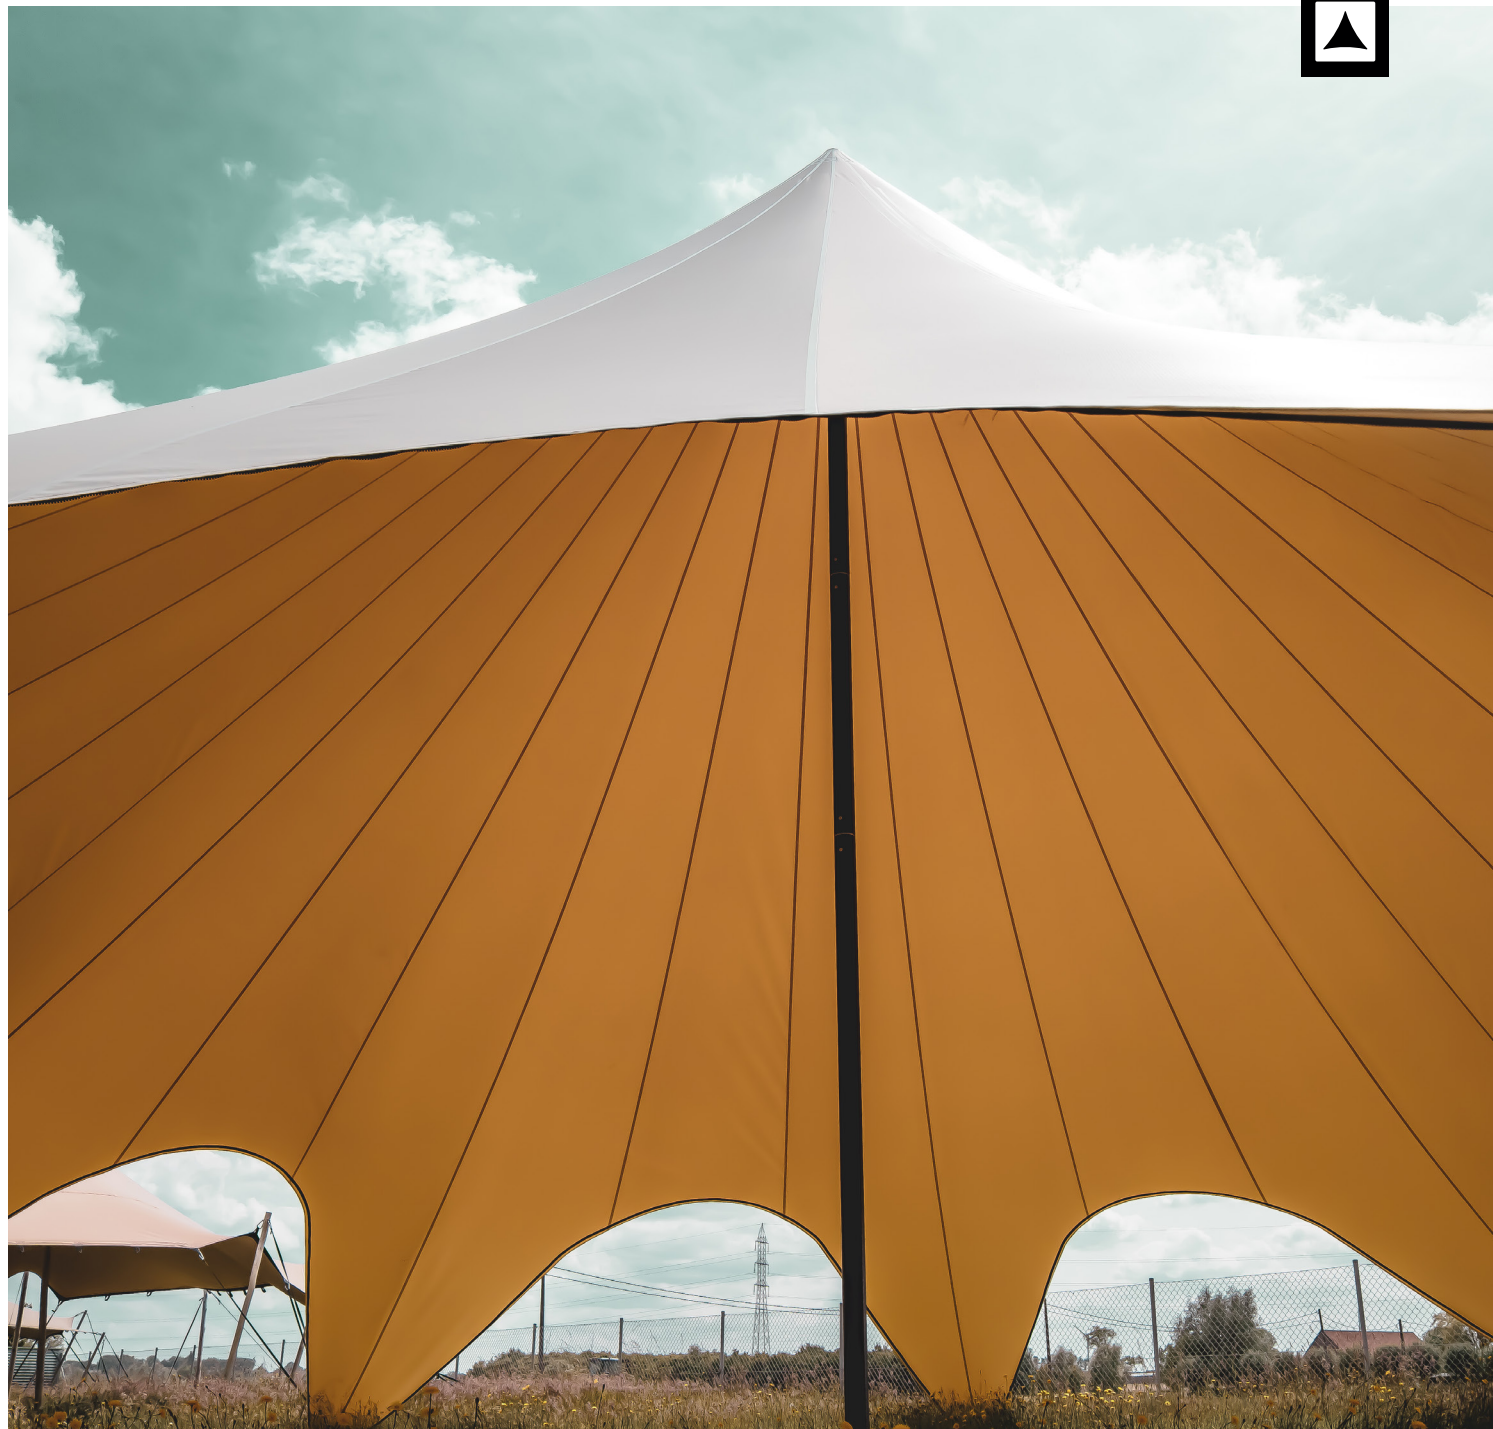

The exclusive star tent is available in three premium fabric qualities to suit your specific needs: 580 g/m<sup>2</sup> shiny PVC, 580 g/m<sup>2</sup> embossed PVC, and 800 g/m<sup>2</sup> opaque white PVC. Each of these fabrics is exceptionally strong, ensuring that the star tent maintains a highly professional appearance while withstanding severe conditions. Whether you prefer the sleek finish of shiny PVC, the textured elegance of embossed PVC, or the robust durability of opaque white PVC, our star tent guarantees superior performance and lasting durability.

### CENTRE POLE

The centre pole of the exclusive star tent is crafted from 4 mm thick aluminium, boasting a diameter of 10.5 cm for exceptional strength and stability. Available in four stylish colours, this robust octagonal pole is designed to extend, ensuring the roof of the star tent is perfectly tensioned. Its professional appearance and durable construction complement the high-quality fabrics of the tent, making it an ideal choice for those seeking both functionality and elegance.

## ANCHORING PLATES

The anchoring plates are specially designed to securely anchor your star tent by hooking the hoof of the tent leg to the cap on the plate. Depending on the size of the tent, the plate is anchored to the ground using two or even three pegs.

The cap feature allows for easy attachment of the tent leg, creating a firm and stable anchoring point. Made from stainless steel, the plate offers maximum stability and durability, resisting the forces of nature and ensuring a long lifespan.

## BASE PLATE

The stainless steel central base plate offers a reliable solution for securely supporting and fixing the center pole of your star tent, ensuring it remains stable and cannot fall over.

The large holes allow for easy anchoring to soft ground with pegs, ensuring a strong and secure hold. For hard ground, the smaller holes can be used with screws to firmly fix the plate in place.

## SIDEWALLS

Both sidewall options are meticulously engineered to blend harmoniously with the star tent structure, providing a combination of durability and aesthetic appeal. These sidewalls are crafted to meet various event requirements, enhancing the overall functionality and visual appeal of the tent. The closed sidewalls offer complete privacy for events that require a more secluded environment, shielding the interior from wind, rain, and other weather conditions to ensure that guests remain comfortable regardless of the external environment. On the other hand, the panoramic window sidewalls create a more open atmosphere, allowing natural light to flood the interior and providing guests with a visual connection to the outside surroundings. This option is perfect for events where maintaining a sense of openness and integrating the beauty of the external environment is essential. The windows are designed to enhance the visual appeal of the tent, offering a modern and elegant look that can elevate the ambiance of any event. Both sidewall options offer flexibility, allowing event planners to customize the star tent to suit diverse event needs. Whether prioritizing privacy and protection or openness and visual connection, these sidewalls ensure that the star tent remains versatile and adaptable for any occasion.
